

IRC 4" Aluminum Post Mount (Residential)

Installation Instructions

- It is the responsibility of the installer to meet all code and safety requirements, and to obtain all required building permits. The installer should determine and implement the installation techniques appropriate for each unique installation situation. Digger Specialties, Inc. and its distributors shall not be held liable for improper or unsafe installations.
- These instructions must be followed exactly as written and the materials used must be exactly as shown in the instructions. Any deviation from the instructions or variation in the materials used/installed may result in an unsuccessful installation and will void the warranty.

Concrete Surface Installation:

Fasten aluminum post mount to concrete using (4) 3/8" x 3" concrete screws (screws not included).

Level the post mount by adjusting the leveling bolts and anchoring fasteners, as necessary. A 1/2" open end wrench will be needed for leveling bolts. Once post mount is level and anchored securely, slide the vinyl post with flair to the floor.

When the railing system is installed, screws from the external railing mounts will go through the vinyl post and into the aluminum tube to secure the vinyl post to the mount.

Wood Surface Installation:

Fasten aluminum post mount to wood surface using (4) 3/8" x 5" or longer stainless-steel lags (lags not included).

Level the post mount by adjusting the leveling bolts and anchoring fasteners, as necessary. A 1/2" open end wrench will be needed for leveling bolts. Once post mount is level and anchored securely, slide the vinyl post with flair to the floor.

When the railing system is installed, screws from the external railing mounts will go through the vinyl post and into the aluminum tube to secure the vinyl post to the mount.

WARNING: When installing the Aluminum Post Mount on top of a wood structure, the 5" lags MUST be lagged entirely into substrate! It will not be strong enough if it is fastened into a 5/4" or a 1 1/2" thick deck board!

Below is an example of how to design the wood structure to accept the Aluminum Post Mount. Any other way must meet or exceed these qualifications.
